quantum scale in which gravitation is effective, we can consider the quantum behavior of physical systems within low-energy regime taking the background geometry of space to be non-Euclidean In this case, some works have already been done showing the modification of HUP when one considers a constant curvature geometry [10, 11](see also [12])

Neural dynamics of emotion and cognition: from ...

2 1 The problem of emotion, cognition, and behavior This paper describes the outlines of a research program for understanding the cognitive-emotional brain, with an emphasis on dynamics: How can we study, characterize, and understand the neural underpinnings of cognitive-emotional behaviors as inherently dynamic

LECTURES IN ELEMENTARY FLUID DYNAMICS

It takes little more than a brief look around for us to recognize that fluid dynamics is one of the most important of all areas of physics—life as we know it would not exist without fluids, and without the behavior that fluids exhibit The air we breathe and the water we drink (and which makes up most of our body mass) are fluids

A semi-analytical approach to molecular dynamics

A semi-analytical approach to molecular dynamics With an ever-increasing need to understand complex behavior at the molecular level comes a high demand for computational methods that can simulate the macroscopic properties of systems from models describing the geometry and the interactions of their molecules Molecular Dynamics (MD), in

asymmetric fault geometry on the dynamics of dip-slip faults Also, the difference in seismicity, due to different faulting mechanisms between thrust and normal faults and asymmetric fault geometry, is examined As a first step to-ward understanding the long-term behavior of geometrically complex fault systems with the dynamic rupture process in-

Dynamics of a $\pm 1/2$ Defect Pair in a Confined Geometry

However, the behavior of defect lines in a confined geometry remains totally unexplored In this paper, based on our previous study of the relaxation dynamics of a dipole of disclination lines with $m = \pm 12$ in a thin hybrid aligned nematic (HAN) cell [28], we continue to study the relaxation dynamics of the dipole in a confined geometry 2
